

HOMEOPATHY TREATMENT FOR CORONA RELATED SYMPTOMS

Dr Balaji Deekshitulu P V

Homeopathy Doctor and Psychologist, Sri Balaji Homeo Clinic, Tirupati, A.P, India.

drsribalaji@gmail.com, cell: 8885391722, 7207255557.

ABSTRACT:

This is a case-related research article, as I know it was written in the first article on how homeopathy can be used to treat coronavirus? In particular those with 55 years, 38 years and 9 years old people selected on own interest. This three people suffering from close symptoms of coronavirus have joined. In this I have experimented with the traditional medicines of homeopathy like Ars alb, Influenzum, Bell, Baptisia Dilutions and Aconit Q, Ocimum SancQ, Eup perf Q, Bapti Q, Bryoni Q, Renaculus B with some special patent medicines. The three survived the disease within a week through homeopathic medicines, My point is that people who are on Coronatine and who are on alternative treatment for coronavirus, use these homeopathic medications within 2 hours, and then the coronavirus slows down. So it is good to have a worldwide investigation.

Key Words: Symptoms of Corana and Homeopathy

INTRODUCTION

A corona virus is kind of common virus that causes an infection in your nose, sinuses or upper throat. Most corona viruses are not dangerous. some types of corona viruses are serious through people died from a severe acute respiratory syndrome (SARS) and the world health organization identified a new type, novel corona virus (n COV). Sometimes but not often, a corona virus can infect both animals and humans.

Most coronaviruses spread the same way other cold-causing viruses do: through infected people coughing and sneezing, by touching an infected person's hands or face, or by touching things such as doorknobs that infected people have touched.

The whole world is working hard today to protect those who are infected with coronavirus, and my appeal is that with homeopathic remedies for coronavirus supplements, the idea is that the disease can be cured quickly, and that homeopathy has no side effects. Also, if you can give everyone an Arsenic Album30 to avoid getting sick.

Symptoms: Cold- or flu-like symptoms usually set in from two to four days after coronavirus infection, and they are typically mild.

Symptoms include: Sneezing / a runny nose/ fatigue/ a cough/ in rare cases, fever/ a sore throat/ exacerbated asthma

There is no cure, so treatments include taking care of yourself and over-the-counter (OTC) medication:

- Rest and avoid overexertion.
- Drink enough water.
- Avoid smoking and smoky areas.
- Take acetaminophen, ibuprofen or naproxen to reduce pain and fever.
- Use a clean humidifier or cool mist vaporizer.

The virus responsible can be diagnosed by taking a sample of respiratory fluids, such as mucus from the nose, or blood.

Transmission

- Human coronavirus spreads from one person to the next.

- Coughing and sneezing without covering the mouth can disperse droplets into the air, spreading the virus.
- Touching or shaking hands with a person that has the virus can pass the virus from one person to another.
- Making contact with a surface or object that has the virus and then touching your nose, eyes, or mouth.
- On rare occasions, a coronavirus may spread through contact with feces.

SARS: Severe acute respiratory syndrome (SARS) was a contagious disease caused by the SARS-CoV coronavirus. It typically led to a life-threatening form of pneumonia. SARS-CoV is unique. It can infect both the upper and lower respiratory tract and can also cause gastroenteritis.

The symptoms of SARS develop over the course of a week and start with a fever. Early on in the condition, people develop flu-like symptoms, such as:

- dry coughing
- chills
- diarrhea
- breathlessness
- aches

Pneumonia, a severe lung infection, may develop afterward. At its most advanced stage, SARS causes failure of the lungs, heart, or liver.

MERS: Symptoms include fever, breathlessness, and coughing. The illness spreads through close contact with people who have already been infected.

In this article, we are highlighting the scope of homeopathic medicines in the treatment of patients with COVID-19 infection. Like other pandemic infections, COVID-19 also presenting with common features. To ease our readers, the clinical features, diagnosis, clinical subclasses, and treatment of COVID-19 are described in the boxes.

Box 1: Common clinical manifestation of COVID-19

- Fever, fatigue, dry cough; shortness of breath.
- Chest X-ray may show an inflammatory change, ground-glass opacity, or consolidation.
- Leucopenia and lymphocytopenia may present.
- No other significant findings may not be found to explain the clinical manifestations.

Chest X-ray may show an inflammatory change, ground-glass opacity, or consolidation.

- Leucopenia and lymphocytopenia may present.
- No other significant findings may not be found to explain the clinical manifestations

Chest X-ray may show an inflammatory change, ground-glass opacity, or consolidation.

- Leucopenia and lymphocytopenia may present.
- No other significant findings may not be found to explain the clinical manifestations
- Fever, fatigue, dry cough; shortness of breath.
- Chest X-ray may show an inflammatory change, ground-glass opacity, or consolidation.
- Leucopenia and lymphocytopenia may present.
- No other significant findings may not be found to explain the clinical manifestations

- Fever, fatigue, dry cough; shortness of breath.
- Chest X-ray may show an inflammatory change, ground-glass opacity, or consolidation.
- Leucopenia and lymphocytopenia may present.
- No other significant findings may not be found to explain the clinical manifestations.

Box 2: Diagnosis (Suspected cases who meet any one of the following criteria) (Bastidas, 2020)

- Respiratory tract swab or blood samples tested positive for 2019-nCoV nucleic acid using Real-Time Polymerase Chain Reaction (RT-PCR).
- Genetic sequencing of the respiratory tract swab or blood samples is highly homologous with the known 2019-nCoV.
- Computed Tomography of the Chest may be used as a primary diagnostic tool (Ai et al., 2020).
- Serology-based tests may be used as a screening parameter (Tang et al., 2020)

Box 3: Clinical classifications (1. Silent infection, 2. Acute upper RTI, 3. Mild Pneumonia)

- Asymptomatic infection (silent infection).
- Acute upper respiratory tract infection: - with only fever, cough, pharyngeal pain, nasal congestion, fatigue,• headache, myalgia or discomfort, etc., and without signs of pneumonia by chest imaging or sepsis.
- Mild pneumonia: - with or without fever, respiratory symptoms such as cough, and chest imaging indicating• pneumonia, but not reaching the criteria of severe pneumonia.

Box 4: Clinical classification (4. Severe pneumonia: showing any of the following) (Bastidas, 2020, Shen et al., 2020, Harris et al., 2011, Bradley et al., 2011)

- Increased respiratory rate;
- Oxygen saturation <92%;
- Hypoxia: assisted breathing, cyanosis, intermittent apnoea;
- Disturbance of consciousness: somnolence, coma, or convulsions;
- Food refusal or feeding difficulty, with signs of dehydration.

Box 5: Clinical classification (5. Critical cases: featuring the following and require ICU care)

- Respiratory failure requiring mechanical ventilation;
- Shock, & c. Combined with other organs failure

HOMEOPATHY Combining the essence of Hippocrates 'like cures like' and 'minimum number of medicine', Dr. Hahnemann added the principles of minimal dose, the idea of individualized medicine, the concept of vital force, and the doctrine of dynamization of medicinal substances, and named it Homeopathy. It is a recognized part of the national health system in several countries, including Brazil, Chile, Mexico, Switzerland, India, and Bangladesh (Mazaherinezhad, 2010, Hasan et al., 2019).

HOMEOPATHIC APPROACH TO COVID-19 At present, the treatment of COVID-19 is symptomatic, and managing emergencies using hospital facilities. The homeopathic medical system, whose foundation is based on symptomatic treatment, can play a vital role in tackling this global disaster. Several numbers of homeopathic medicines are there for patients with COVID-19 infection. Review and repartorization of the common symptoms of COVID-19 suggest Arsenic Album, Pulsatilla, Silicia, Nitrum Muriaticum, Phosphorus, Calcarea Carbonicum, Hyper Sulphur, Lachesis, Nux Vomica, Sulphur and many other medicines . We pursue this using Synthesis Repertory- Treasure Edition, by Schroyens F, from Repertory Software Radar 10.0. By adding personalized character to these symptoms, a homeopathic physician might easily select the right individual remedy. Recently, India's ministry of 'AYUSH', suggested homeopathic medicine 'Arsenic albumin 30' as a prophylactic to prevent COVID-19 infection (AYUSH, 2020). Prime general secretary of Liga Medicorum Homeopathica Internationalis (LMHI), an aristocrat association of homeopathic physician, supported this proposal (Dasgupta, 2020). Eminent physician Dr. Vithoukas expressed his silent content to this proposal; however, he pointed out the limitation of access to the patients of homeopathic physicians in this current breakout (Vithoukas, 2020). Various researchers have proven the efficacy of homeopathic medicine in a similar set of symptoms, as stated in box.3, namely respiratory tract infections and mild pneumonia (Beghi and Morselli-Labate, 2016). The potentiality of homeopathic medicines in managing flu symptoms, as mentioned in box.1 and scope of prophylactic, was demonstrated by some scholars

(Siqueira et al., 2016). Researchers found fibrogranulation proliferation tissues in the small bronchioles in COVID-19 patients (Tse et al., 2004); homeopathic medicine Silicea and Arsenicum iodatum have a prospect in resolving symptoms like pulmonary fibrosis (Vermeulen, 1997). In severe cases, as if in box 4, several homeopathic medicines, including Cassia sophera, Lobelia inflata, and Zingiber officinale, could help along with hospital management. A group of researchers shown the tincture of Cassia sophera, prepared from powdered leaves, significantly helps in respiratory distress (Nagore et al., 2009). Lobelia is being used as a respiratory stimulator and possess an effective anti-dyspnoetic agent (Joseph E. Pizzorno, 2016); and aqueous extracts of Zingiber officinale can serve a suitable chemotherapeutics for the treatment of respiratory tract infection (Okiki Pius et al., 2015). Recently, in Italy, a group of most positive and probable COVID-19 patients was treated and healed with homeopathic medicines; these patients were preserved in home isolation facilities, and none of them received hospital facilities (Valeri, 2020). In another study in Iran, a small group of COVID-19 patients experienced development with homeopathic treatment (Aditya Kasariyans, 2020). We acknowledge the limitations of both clinical and in vitro research of homeopathic medicines. Moreover, homeopathic medicine has a long history of criticism in lacking scientific explanation. However, acceptance and application of experimental medicine are not unethical when conventional medicine is facing difficulties (Organization, 2014).

Treatment of above symptoms:

Data collection: Symptoms based

Sample: 3

Duration of study: 15 days

Case History 1:

55 Years Old Women like cough, drowsiness, loss of appetite, fever, sore throat, headache etc ...she was used allopathic treatment for 15 days but not reduced. Then came to me allopathic doctors got negative about the corona test and asked to give a homeopathic treatment, then started our treatment to request me.

Homeopathy medicines below Combination is giving

- Ars alb 200 + Influenzium 200 + Bell 30+ Baptisia 30 Pills 6-6 (M-N)

- Aconit Q + Ocimum SancQ+ Eup perf Q + Bapti Q+ Bryoni Q + Renaculus B used 10 drops with hot water (M-A-N) + Virotic Drops (Mystic Company)-5 drops (M-A-N)
- Febral Tab (weezal Company) – 2-2-2 (M-A-N)

Case History 2:

Like the case study above, the 9-year-old girl suffered from no known allopathic medicine and was started on homeopathic medication with recovery in 3 days.

Homeopathy medicines below Combination is giving

- Ars alb 200 + Influenzium 30 + Bell 30+ Baptisia 30 – Before food Pills 2-2 (M-N)
- Aconit 30 + Rancus Blb 30+ Eup perf 30 + Bryoni 30 - pills 2-2 (M-N) – After food
- Febral Tab (weezal Company) – 2-2-2 (M-A-N)

Case History 3:

As with the first case study, 38-year-old men were diagnosed with all problems, and had been experiencing problems for almost a month. All the tests were done, the coroner said that the doctors were using medication, but the motions and vomiting were reduced but the fever. Cold, cough, and sore throat did not decrease. After a month or so the corona effect came to him. We started a homeopathic treatment.

Case Solution in 3rd

Homeopathy medicines below Combination is giving

- Ars alb 200 + Influenzium 200 + Bell 30+ Baptisia 30 Pills 6-6 (M-N)
- Aconit Q + Ocimum SancQ+ Eup perf Q + Bapti Q+ Bryoni Q + Renaculus B used 10 drops with hot water (M-A-N) + Virotic Drops (Mystic Company) -5 drops (M-A-N)
- Febral Tab (weezal Company) – 2-2-2 (M-A-N)

DISCUSSION:

The present study this confirms the efficacy of results in constitutional Homoeopathic remedies formulas in the treatment of corona symptoms. This study will help to Prevent and post treatment of corona symptoms, increase immunity & unnecessary

expensive and uncertain therapeutic measures thus improving the quality of life and chances of conception

CONCLUSION:

This clinical trial is being conducted only on those who suffer from symptoms of the recent coronary disease and is a cure. But it would be nice if this experiment was still conducted on corona positives. My hope is that those who follow other medical procedures will be able to recover quickly if they use these homeopathic medicines. If further research is most important in taking corona positive cases, you should know how these drugs work, for which extensive research is needed.
